

## News for the Commercial, Residential and Wastewater Trade

### ITT Introduces the autocirc® Instant Hot Water System

ITT recently introduced the new autocirc® under sink instant hot water system. Designed for plumbing systems without a recirculation line, the autocirc® installs underneath the farthest fixture from a standard water heater. The pump's microprocessor provides the precise frequencies and voltages for the electronically commutated motor (ECM) to run at maximum efficiency. Its shaft-less spherical motor design allows the pump to run on as little as 14 watts of power.

### The Facts About Sudden Thermal Changes in a Boiler

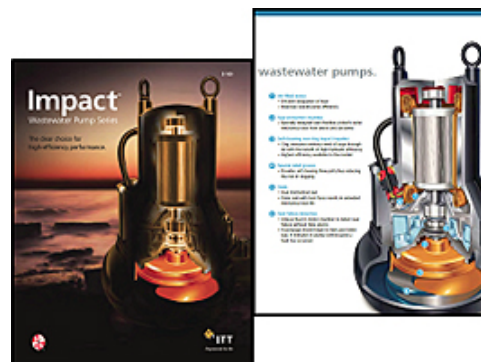

Nowadays when a modern hot water boiler experiences thermal shock, the cause for this aberration is often ignored and written off as defective material or poor workmanship. However, there is always a reason why a boiler, no matter the type (cast iron, steel fire tube, or steel water tube) becomes thermally shocked.

[Click here](#) to read about the causes of boiler thermal shock and what preventative measures you can take to avoid the costly situation.

### ITT Introduces B&G Impact™ MK and MV Sewage Pumps

ITT Bell & Gossett is proud to introduce the new Impact series of wastewater products which provide the highest efficiency submersible wastewater pumps in the market. Included in the Impact product is a complete line of innovative pumps ranging from 2" to 6" discharge. It includes two styles of impellers in order to cover every building service application. The MK self cleaning non-clog impeller maintains a high level of efficiency even in fluids with a high solids and fibrous content. The MV vortex style impeller is ideal for systems with media containing sand or other abrasive solids. [Click](#) here for more information on the new wastewater products.
